Languages: PHP, SQL, JavaScript, Python, GDScript, Markdown, Java, HTML, CSS, C#

Technologies: Git, Laravel, MySQL, VS Code, Godot Engine, Selenium, Docker, Digital Ocean, AWS, Linux

Others: Agile Methodologies (Kanban & Scrum), Database Design, Game Design

Experience

KodeTeQ Business Solutions Inc., Backend Developer

Metro Manila, PH
March 2025 - September
2025

- Designed the database and developed an "Event Ticketing System" using Laravel and Maya Checkout integration with webhooks.
- Integrated a third-party casino game provider into our games management platform, enabling seamless access for thousands of active users.
- Initiated in-house documentation for the company's projects using MKDocs.

Across Lunacia, Full-stack / Game Developer

Overseas (Remote)
February 2022 – March 2025

- Built polished, playable demos in Godot (GDScript) with narrative and combat systems, driving community engagement and playtesting.
- Built a Python Discord bot and Laravel API under crunch time to manage hundreds of public tester accounts and integrate with Sky Mavis' APIs — automating onboarding, syncing game data, and improving play-testing operations.
- Deployed and managed Linux servers and MySQL on DigitalOcean for testing environments

MegaXcess IT Solutions, Software Developer

Metro Manila, PH
June 2021 – February 2022

- Focused on backend development using Laravel, I built and maintained web applications that supported internal operations and client-facing platforms.

Belvedere Vista Corporation, Full-stack Developer

Pampanga, PH
December 2020 – May 2021

- Developed a Laravel-based backoffice system handling thousands of daily accounting records and detailed reports, streamlining operations and reducing manual workload.
- Helped secure production servers against daily attacks through system hardening and proactive monitoring.

Wyvern Innovations, Founding Team Member – Developer

Metro Manila, PH
February 2019 – December
2020

- Contributed to the early phases of development of the new payroll system for the Bureau of Internal Revenue (BIR) as part of the core dev team.
- Wrote Python scripts using Selenium for test automations and data analysis.

Omnibus Technologies, Founding Team Member – Developer

Metro Manila, PH
June 2018 – September
2020

- Developed a law firm management system using Laravel, built to streamline client records, case tracking, and billing. This platform became the core product that earned the team a spot in IdeaSpace, a competitive startup incubation program in the Philippines.

Education

BS Adamson University, Computer Science

June 2014 – March 2018

- **Thesis:** *Influencing Game Dynamics in a Roguelike Game Through Procedural Content Generation Using Genetic Algorithm*

Activities and Involvement

Pixel Game Jam 2025, Participant

itch.io
June 2025

- Developed *Lost, Signals*, a 2D interactive fiction game made in Godot, during a 1-week game jam. I served as the sole programmer and game designer, handling core gameplay systems, narrative flow, and rapid prototyping under tight time constraints while collaborating with teammates on writing and visuals.

Indie Fiesta – ESGS (Electronic Sports and Gaming Summit), Exhibitor

SMX Convention Center
October 2018

- Exhibited *Pollie Potts*, a 2D platformer built in Godot, at ESGS 2018's Indie Fiesta, where I showcased a playable demo, received feedback from players, and connected with fellow developers and attendees. I was the sole programmer on the project, working alongside a teammate who handled the art.

Getting Started in Game Development with Godot 3, Speaker

Adamson University
2018

- Delivered an introductory talk on game development using Godot 3, covering core concepts such as scenes, scripting with GDScript, and 2D game mechanics. Shared personal development workflows, tips for beginners, and live demos to help students kickstart their game dev journey.

WebGeek DevCup Hackathon, Participant

Metro Manila, PH
August 2016

- Our team created an automated code generator based on prompts within the code's comments using Java.

Adamson Computer Science Society, Auditor

Adamson University
2016-2017

- Oversaw the organization's financial records and compliance, ensuring accurate reporting and transparent budgeting for events and activities.

Adamson Computer Science Society Coders, Chief Research & Design Officer

Adamson University
2016

- Led the research and design initiatives of the organization, focusing on developing tools, resources, and internal systems to support coding events, workshops, and student projects.
